

# Introduction to Quality Improvement (QI) Webinar

April 8, 2020

The Healthy Start EPIC Center is operated by the [National Institute for Children's Health Quality](#). This project is supported by the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number 1 UF5MC327500100 titled Supporting Healthy Start Performance Project.

**National Institute for Children's Health Quality**

# Webinar Agenda

Topic	Speaker
Housekeeping	Tess Pritchard
Welcome	Kenn Harris
Introduction to Quality Improvement (QI)	Dr. Jane Taylor
Q&A	Dr. Jane Taylor
Closing Remarks	Kenn Harris

# Meeting Logistics

## Please note the following:

- This session is being recorded, and will be archived for future viewing.

- All participants are muted upon entry. We ask that you remain muted to limit background noise.

- Members are encouraged to participate in the discussion by typing your comment/asking questions using the chat box.

# Connecting to the Audio Conference

- Join Zoom Meeting by **clicking Zoom Meeting link** & launching the Zoom application
- An audio conference box will appear
  - If you do not see the box click the **'Join Audio' button**
- From the audio conference box: Select to **"Phone Call"** or **"Computer Audio"**
- If using the phone:
  - dial the number next to "Dial"
  - You will be prompted to enter the **"Meeting ID"**
  - Then you will be prompted to enter the **"Participant ID"**

**Join Zoom Meeting:**  
<https://zoom.us/j/237206404>

# Ways to Participate: Chat

The screenshot displays a Zoom meeting window with the following details:

- Zoom Participant ID: 49 Meeting ID: 617-788-369
- Talking: [Redacted]
- Meeting Topic: FL CMS LAN Meeting
- Host: FL CMS LAN
- Invitation URL: <https://zoom.us/j/617788369> (Copy URL)
- Participant ID: 49

At the bottom of the Zoom window, the navigation bar includes: Join Audio, Start Video, Invite, Participants (1), Share, Chat, Record, and Leave Meeting. The 'Chat' button is highlighted with a red box.

On the right side, the 'Zoom Group Chat' sidebar is visible. It includes a dropdown menu set to 'Everyone', a 'File' icon, and a text input field labeled 'Type message here...'. A red box highlights the 'Everyone' dropdown with the text 'Chat here to everyone!'.

Two red callout boxes provide instructions:

- A box at the bottom left points to the 'Chat' button: "At the bottom of the Zoom window, you will see a 'Chat' button".
- A box in the center points to the chat sidebar: "After you click the 'Chat' button, a sidebar will appear where you can chat to all participants".

# Participating with via text messaging

Send all messages  
to this five digit  
number: **22333**

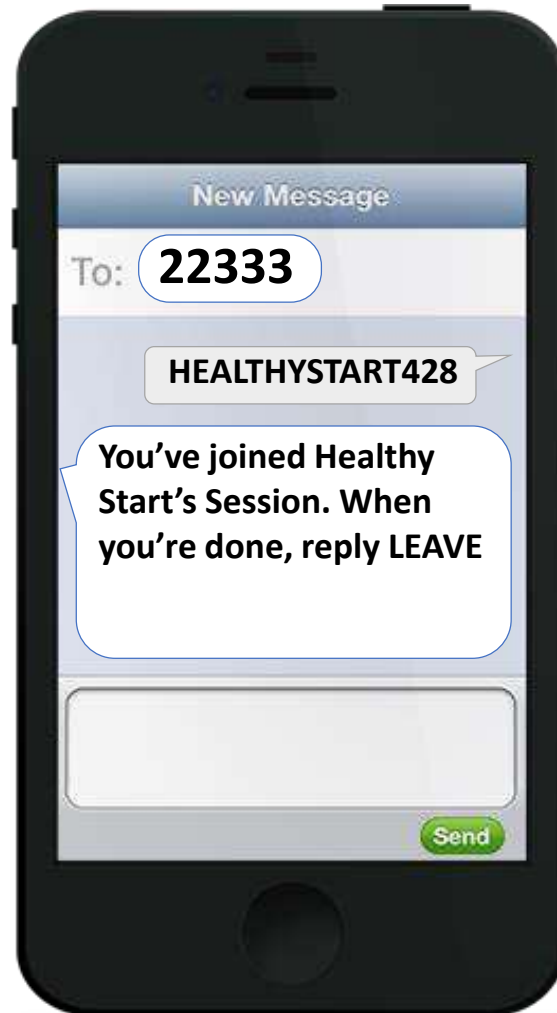

To log in, include in  
body of text the  
word (*you only  
have to do this  
once*):

**HEALTHYSTART428**

# Participating with via text messaging

After you have  
logged in, you  
will receive this  
confirmation  
message

# Poll Everywhere: Additional Tips

- Capitalization does not matter; spelling and spaces do
- You only have to text the word “HEALTHYSTART428” the first time. After that, just send a normal text to respond to polls.
- If texting 22333 doesn’t work: Visit [pollev.com/HEALTHYSTART428](https://pollev.com/HEALTHYSTART428) to respond to the current poll
- NO charges to your cellphone beyond what your phone carrier typically charges for a text message

**Please indicate your level of knowledge on Quality Improvement before today's webinar (1 = the least knowledgeable, 5 = the most knowledgeable)**

Introduction to  
Quality  
Improvement

---

Jane Taylor, Ed.D.

# Session Objectives

- Define Quality
- Become familiar with basics of improvement
- Review Model for Improvement

# What is Quality

# As a Healthy Start site, what is quality? *Please chat!*

HRSA Gives Children and Families a **HEALTHY START**

HRSA's Maternal and Health Bureau wants all U.S. children to reach their maximum potential. Healthy Start helps by improving the health of America's mothers and children before, during, and beyond pregnancy. It reduces infant mortality rates, increases access to early pre-natal care, and removes barriers to healthcare access.

Celebrate the **Healthy Start program's** 25th anniversary. Our achievements include:

Reducing infant mortality

Addressing the differences in health between the general population and racial/ethnic minorities

We serve communities with:

Infant mortality rates at least **1 1/2 times** the U.S. national average

Maternal and infant health issues including low birth weight, pre-term delivery, maternal morbidity and mortality

High rates of poverty, low education, limited access to care, and other socioeconomic factors

# W. Edward's Deming

Now  
and in  
the  
future.

Who is  
responsible for  
quality?

Can quality  
increase and  
costs go down?

70 x 570

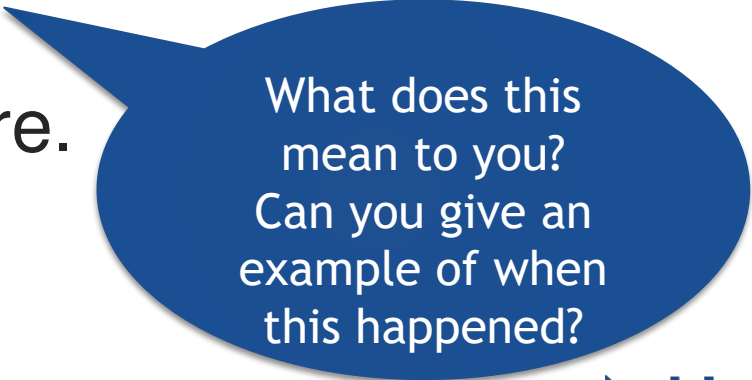

# Why is providing quality service so hard?

Defining quality means we have to understand future needs of HS clients in a way we can measure it. You have a lot of measures!

This way we can know how we are doing satisfying our clients.

The hard part is that as soon as we feel good about it, needs may change.

Constantly looking to the future.

What does this mean to you?  
Can you give an example of when this happened?

# Growing Clients who Learn How to be Great Consumers

- Support clients on what to expect; what we can offer; how to best use HS and CAN services
- Focus on the quality and continual improvement of your service

Feed client reactions back into service improvement and redesign  
Complaints are too late!  
Judgments change

# Problems in understanding judgment of quality

- What is good service?
  - High marks for interactions with staff, trusting relationships?
  - Low marks for referrals or connection to essential services
  - High marks for connecting women and children with insurance
  - Middle marks for smoking cessation referrals
- From whose perspective?
  - Staff, Community partners, clients: women, fathers?

# Key Elements of Improvement

- Will to do what it takes to change to a new system
- Ideas on which to base the design of the new system
- Execution of the ideas

# The Model for Improvement

Aim

Measures

Changes

From: Associates in  
Process Improvement

# Question 1: What are we trying to accomplish?

- Useful at largest project level
- Useful when working on components or any area for improvement
- Useful even thinking about a meeting, a strategy
- Useful . . . . *Please change When asking this question may be useful for you*

# Example

- The Happy Healthy Start Center intends to develop a reliable risk assessment tool for our clients so that:
  - 90% of the time or more our clients receive services they want and need
  - Leadership can use the assessment for resourcing staff, for staff training and for programing
  - 90% or more of all screens are completed upon enrollment

# Aim

- Direction
- Communicates magnitude of change
- Usually involves consensus and agreement

What?

By when?

How much improvement?

For whom?

# Another example

- Heart-felt Healthy Start will improve recruitment of clients by 50% by June 2021 so that we grow from 50 to 100 fathers and to 250 or more women.
- *Chat in: try it!*
- *Draft an aim statement of something you want to do. What; by when, for whom, how much improvement (measureable please).*

# Model for Improvement

What are we trying to accomplish?

---

How will we know that a change is an improvement?

---

What change can we make that will result in improvement?

# We answer how would we know a change is an improvement with data

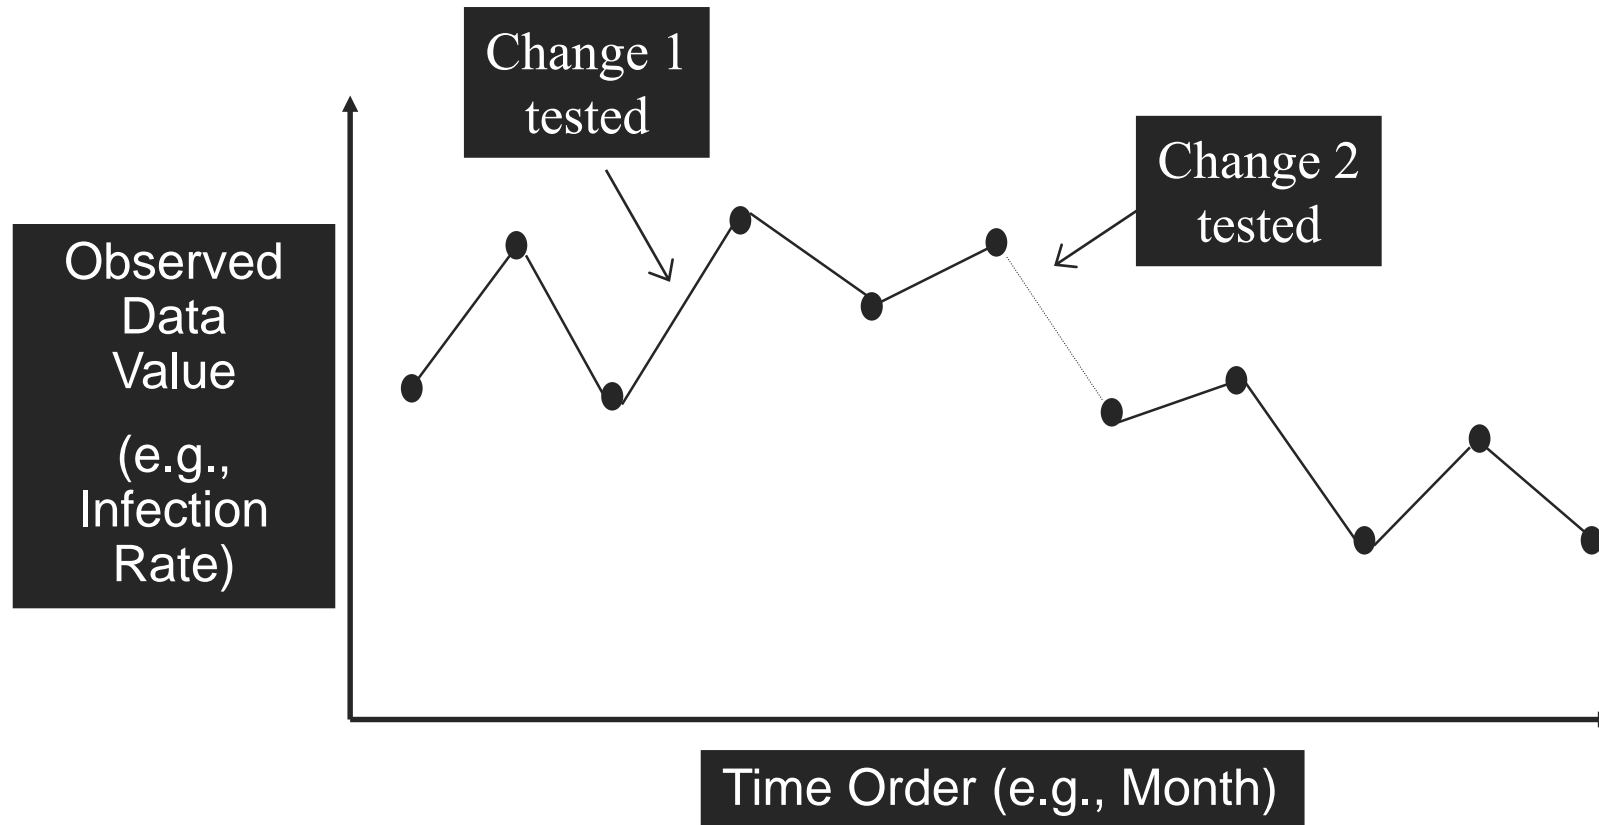

- Qualitative and Quantitative
- Just enough data
- No data is perfect; we strive for usefulness
- Use sampling and stratification (race, ethnicity, gender, zip code, age, etc.)
- Sequence data – usually over time
- Data informs better action to serve clients

### 3 Faces of Measurement: Solberg, Moser, McDonald, 1996

Aspect	Improvement	Comparison or Accountability	Clinical Research
Aim:	Improvement of care	Comparison, choice, reassurance, spur for change	New knowledge
Test observability	Test observable	No test, evaluate current performance	Test blinded
Bias	Accept consistent bias	Measure & adjust to reduce bias	Design to eliminate bias
Sample size	“Just enough” data, small sequential samples	Obtain 100% of available, relevant data	“Just in case” data
Flexibility of hypothesis	Hypothesis flexible, changes as learning takes place	No hypothesis	Fixed hypothesis
Testing strategy	Sequential tests	No tests	One large test
Determining if change is improvement	Run charts or Shewhart charts	No change focus	Hypothesis tests (T-tests, F-tests, Chi-square), p-value
Confidentiality of data	Data used only by those involved in the improvement	Data available for public consumption	Research subjects’ identities protected

# Annotated Run Chart

- Plot small samples frequently over time

## Number of Fathers Enrolled Per Month Run Chart

# Run Chart: Rules for Identifying Statistically Significant Change

Shift: 6 points in row on same side of the median

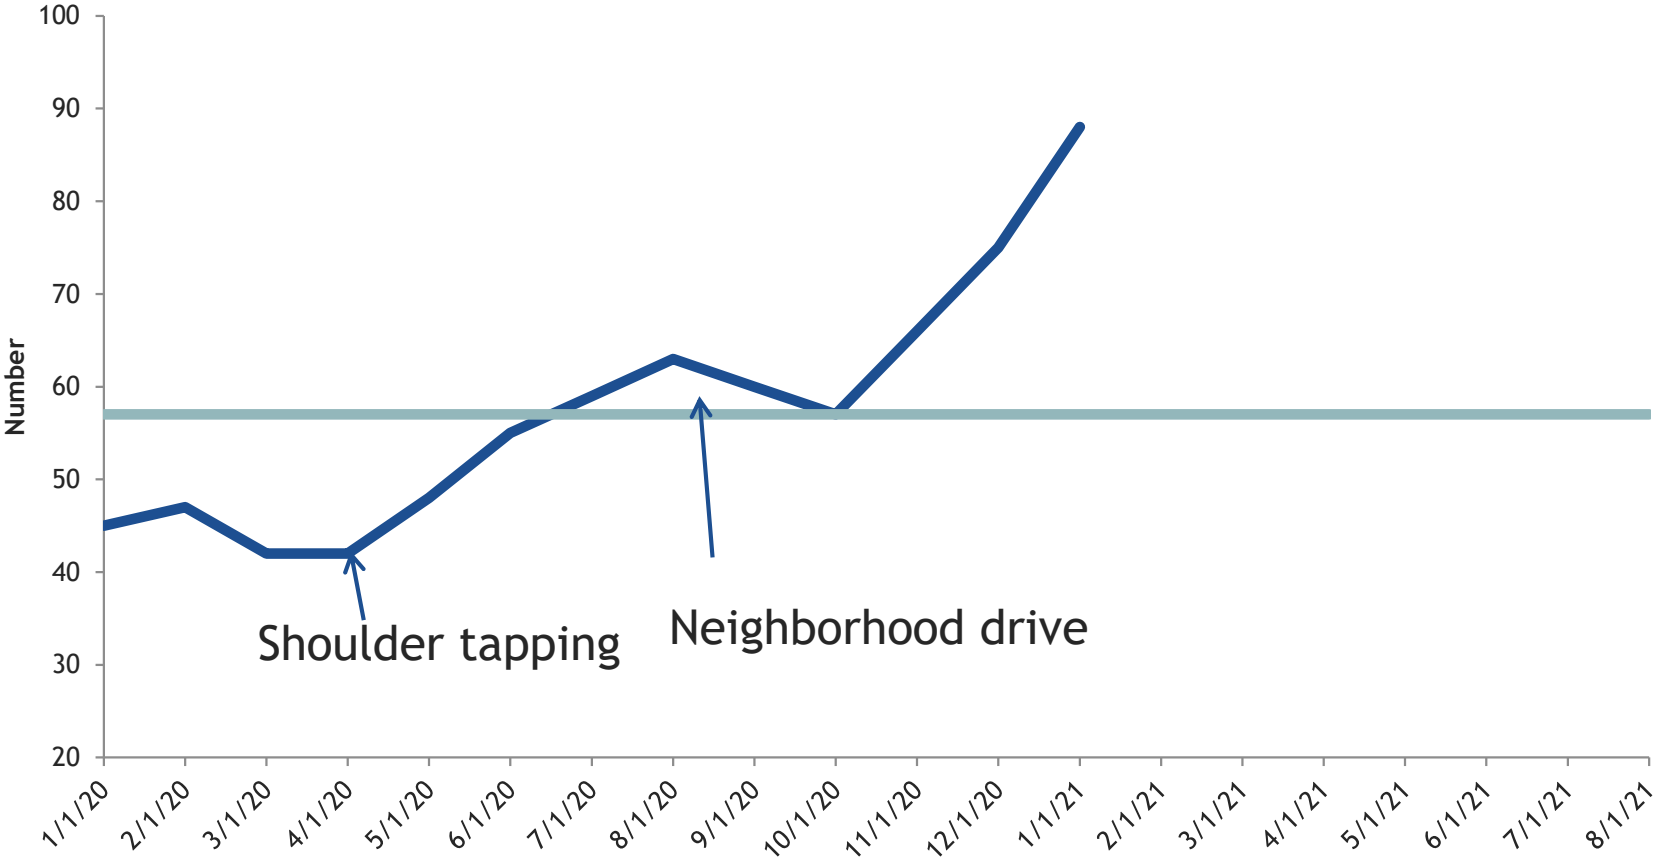

Trend: 5 points in row headed in same direction

These 3 simple rules help us interpret data

Astronomical Point: a obviously, even blatantly different value

# Number of Father Enrolled Per Month Run Chart

# Three Types of Measures

- **Outcome Measures**: Voice of the client. How is the system performing? What is the result?
- **Process Measures**: Voice of the workings of the system. Are the parts/steps in the system performing as planned?
- **Balancing Measures**: Looking at a system from different directions/dimensions. What happened to the system as we improved the outcome and process measures (e.g. unanticipated consequences, other factors influencing outcome)?

# Healthy Start Family of Measures

- Outcome measures
  - Improve women's pre and interconception health
  - Family Resilience
  - Infant Mortality
- Process measures
  - Recruitment, retention
  - Smoking cessation during pregnancy
  - UTD well child visits
  - Screening: depression, essential services, etc
- Balancing measures

Please chat  
What else?

# Measurement: How Will We Know That a Change is an Improvement?

- Key measures are required to assess progress toward the aim
- Specific measures can be used for learning during PDSA cycles
- Data from the system (including from clients and staff) focus improvement and refine changes

# Model for Improvement

What are we trying to accomplish?

How will we know that a change is an improvement?

What change can we make that will result in improvement?

# The PDSA Cycle

Four Steps: **P**lan, **D**o, **S**tudy, **A**ct

Also known as:

- Shewhart Cycle
- Deming Cycle
- Learning and Improvement Cycle

# Let's hear from one of our own. Dallas Healthy Start

## ***Dallas Healthy Start Case Management Incoming Risk Assessment***

### **Objective:**

- Assess the risk level of a woman's pregnancy and parenting phases, prior to enrollment into *Dallas Healthy Start*.
- Determination to inform her initial case management [CM] plan, including the assignment of appropriate staff personnel and linkage to program and community resources.

### **Strategy:**

- Develop a predictive analytics tool with quantitative scoring functionality.

### **Tactics:**

- Survey "best practices" other HS sites, other MCH programs, and our CM software vendor.
- Collaborate with NICHQ Technical Assistance to develop a risk acuity "prototype". Plan-Do-Study-Act - Test and refine [iterative]. Implement.
- Anticipated population distribution: 25% high-, 45% moderate-, 30% low-risk level.

### Dallas Healthy Start Acuity Scale

Client Name: \_\_\_\_\_ Date of Assessment: \_\_\_/\_\_\_/\_\_\_  
Completed By: \_\_\_\_\_ Position/Credential: \_\_\_\_\_

Risk Factors	
Please indicate [✓] all applicable Risk Factors	
High Risk Factors	Moderate Risk Factors
<input type="checkbox"/> Low birth weight [PN; history of < 5 lb 8 oz]	<input type="checkbox"/> Low birth weight [baby - ICC enrollee]
<input type="checkbox"/> Preterm birth [PN; history of < 37 wk gestation]	<input type="checkbox"/> Preterm birth [baby - ICC enrollee]
<input type="checkbox"/> Maternal age [PN; mother < 18 yr]	<input type="checkbox"/> Maternal age [PN; mother > 35 yr]
<input type="checkbox"/> Unmanaged or untreated chronic disease or condition [e.g. hypertension, diabetes, asthma, anemia]	<input type="checkbox"/> Managed, treated or history of chronic disease or condition [e.g. hypertension, diabetes, asthma, anemia]
<input type="checkbox"/> Unmanaged or untreated HIV/AIDS	<input type="checkbox"/> Managed and treated HIV/AIDS
<input type="checkbox"/> PN care – none	<input type="checkbox"/> PN care - inconsistent/late entry [> 14 wk]
<input type="checkbox"/> STD [untreated]	<input type="checkbox"/> STD [treated or history of]
<input type="checkbox"/> Smoking [current]	<input type="checkbox"/> Smoking [history of]
<input type="checkbox"/> Alcohol use [PN] or abuse [untreated]	<input type="checkbox"/> Alcohol abuse [treated or history of]
<input type="checkbox"/> No positive partner involvement/support	<input type="checkbox"/> Minimal positive partner involvement/support
<input type="checkbox"/> Open CPS case	<input type="checkbox"/> Closed CPS case
<input type="checkbox"/> Multiple gestation [PN]	<input type="checkbox"/> Child with special healthcare needs
<input type="checkbox"/> Loss of fetus/stillbirth [PN; history of]	<input type="checkbox"/> No medical home
<input type="checkbox"/> Death of infant/child [PN; history of]	<input type="checkbox"/> No health insurance
	<input type="checkbox"/> Inadequate or no income
	<input type="checkbox"/> Family history of chronic disease or condition [e.g. colon cancer, breast cancer]
	<input type="checkbox"/> No reproductive health/family plan
<b>Automatic Risk Factors → Intensive Case Management</b>	
<input type="checkbox"/> Domestic abuse [current]	<input type="checkbox"/> Difficult partner or family dynamics
<input type="checkbox"/> Homelessness	<input type="checkbox"/> Unstable housing
<input type="checkbox"/> Illicit drug use [untreated]	<input type="checkbox"/> Illicit drug use [treated or history of]
<input type="checkbox"/> Depression/mental health/psych care [untreated]	<input type="checkbox"/> Depression/mental health/psych care [treated or history of]

Calculation of Risk Score		
# "Auto" Risk Factors _____ × <b>X</b> points = _____	<b>Total Points</b>	<b>Risk Level</b>
# High Risk Factors _____ × <b>Y</b> points = _____	More than <b>A</b>	HIGH
# Moderate Risk Factors _____ × <b>Z</b> points = _____	Between <b>A</b> and <b>B</b>	MODERATE
<b>TOTAL Points calculated = _____</b>	Less than <b>B</b>	LOW

[continued on reverse]

Developed in collaboration with National Institute for Children's Health Quality [NICHQ], Parkland Health & Hospital System Community Health Institute [PHHS CHI], Susan Wolfe & Associates LLC, Dallas, TX, and Texas Department of State Health Services [DSHS]

Revised 9-7-2019

### Assignment of Case Management Level

Please indicate [✓] Assignment of Case Management Level:

- High Risk: Total points > A → High level of case management indicated
- Moderate Risk: Total points between A and B → Moderate level of case management indicated
- Low Risk: Total points less than B → Low level of case management indicated

### Qualitative Risk Classification:

Based on your own judgement of other circumstances or additional criteria, did you choose a different category from the one indicated by the calculated score?

- Yes
- No

If "Yes", please state why:

---

---

---

---

---

---

---

---

### Other Comments:

Revised 9-7-2019

## PDSA #1: Administer to Sample [n= 30] and Analyze

### Feedback:

- Does not include strength / resilience factors
- Easy to complete

### Results of High [H] and Moderate [M] Risk Factor Scoring:

- 13% of prenatal program participants [PPs] < 18 y.o. [H]
- 10% of PPs reported no partner involvement [H]
- 30% of PPs reported inadequate or no income [M]
- 27% of prenatal PPs > 35 y.o. [M]
- 27% reported difficult partner or family dynamics [M]
- 17% reported minimal partner involvement/support [M]

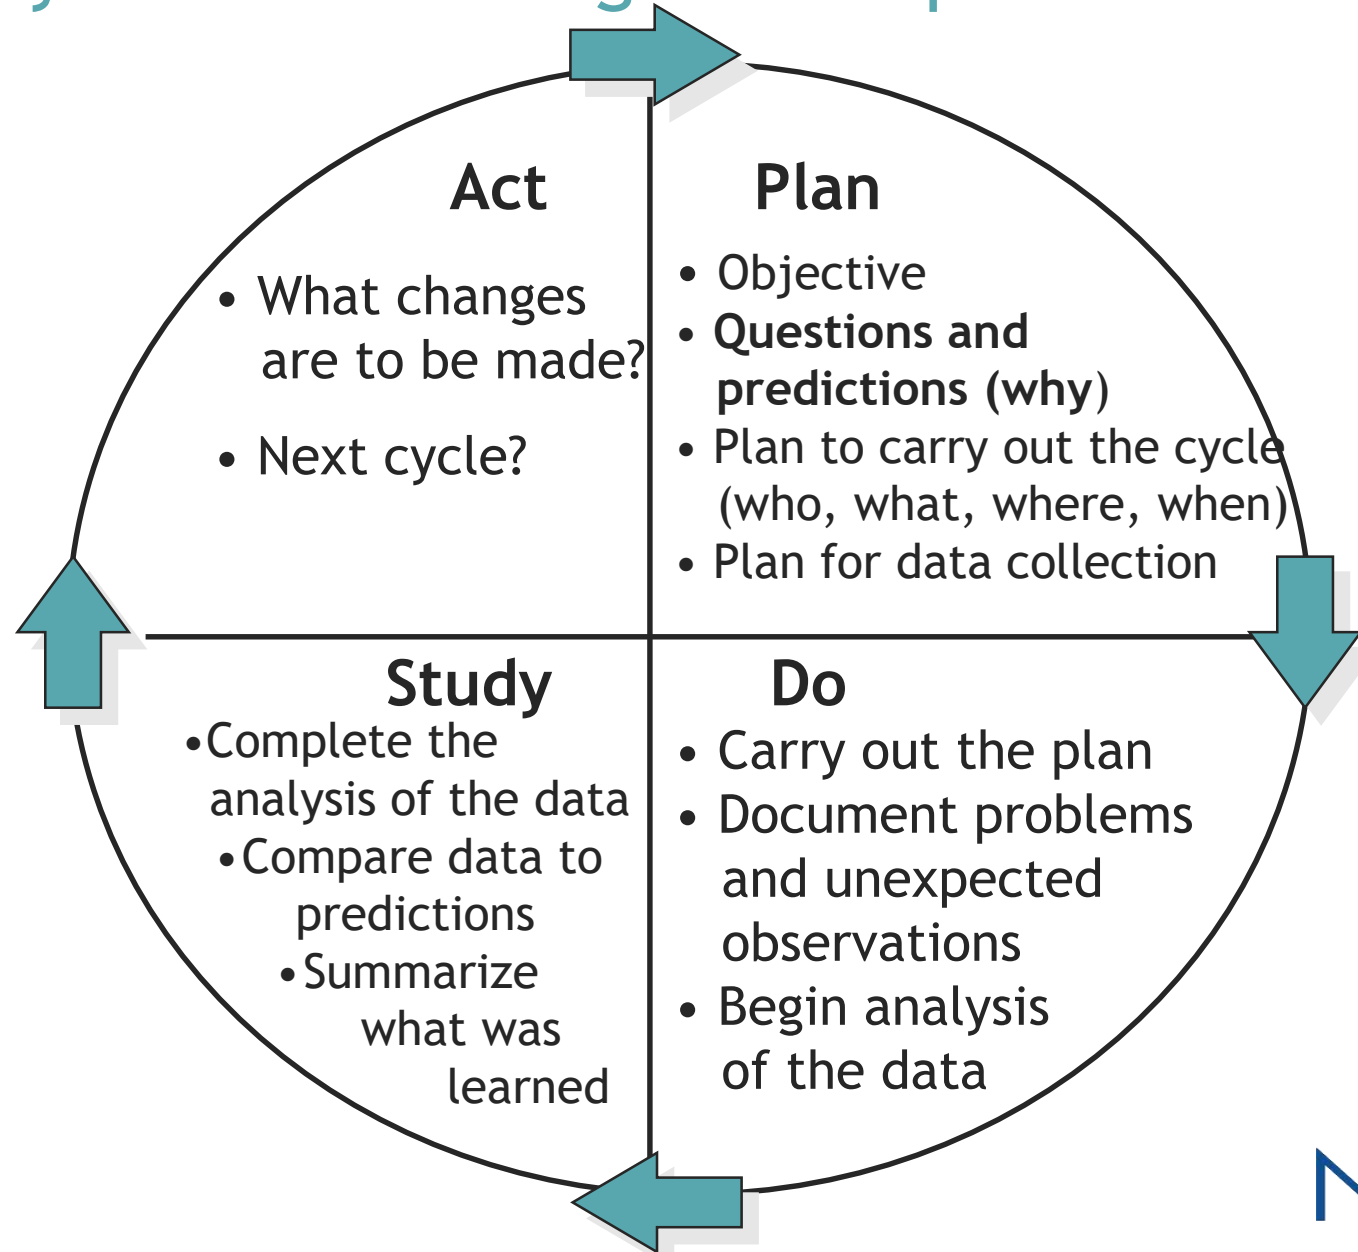

### Next Steps:

- Consider if a combination of moderate risk factors constitutes high-risk.
- Consider immediate take-aways [PN age, Fatherhood programming, etc].
- Investigate inclusion of resilience-based factors.
- Research asset-based approaches.
- Iterate and administer to additional PPs.

# The PDSA Cycle for Learning and Improvement

Small scale test  
Series of tests  
Wide-scale tests  
Implementation

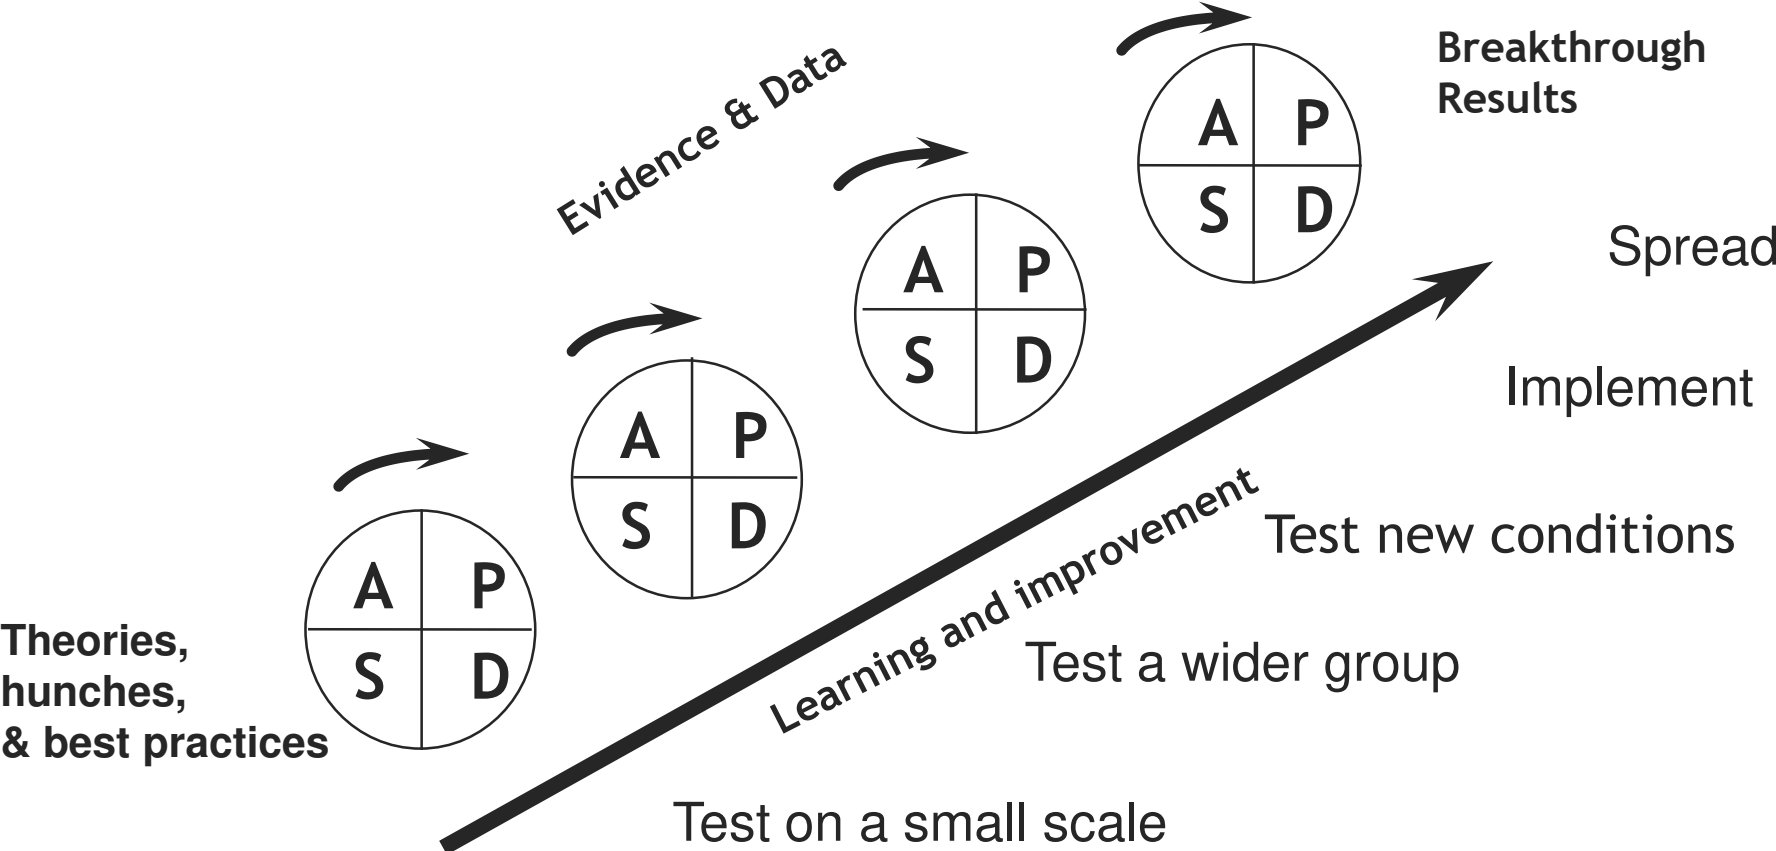

# Why Test?

- Increase the belief that the change will result in improvement
- Predict how much improvement can be expected from the change
- Learn how to adapt a change to conditions in the local environment
- Evaluate costs and side-effects of the change
- Minimize resistance upon implementation
- Localize a good idea to your setting

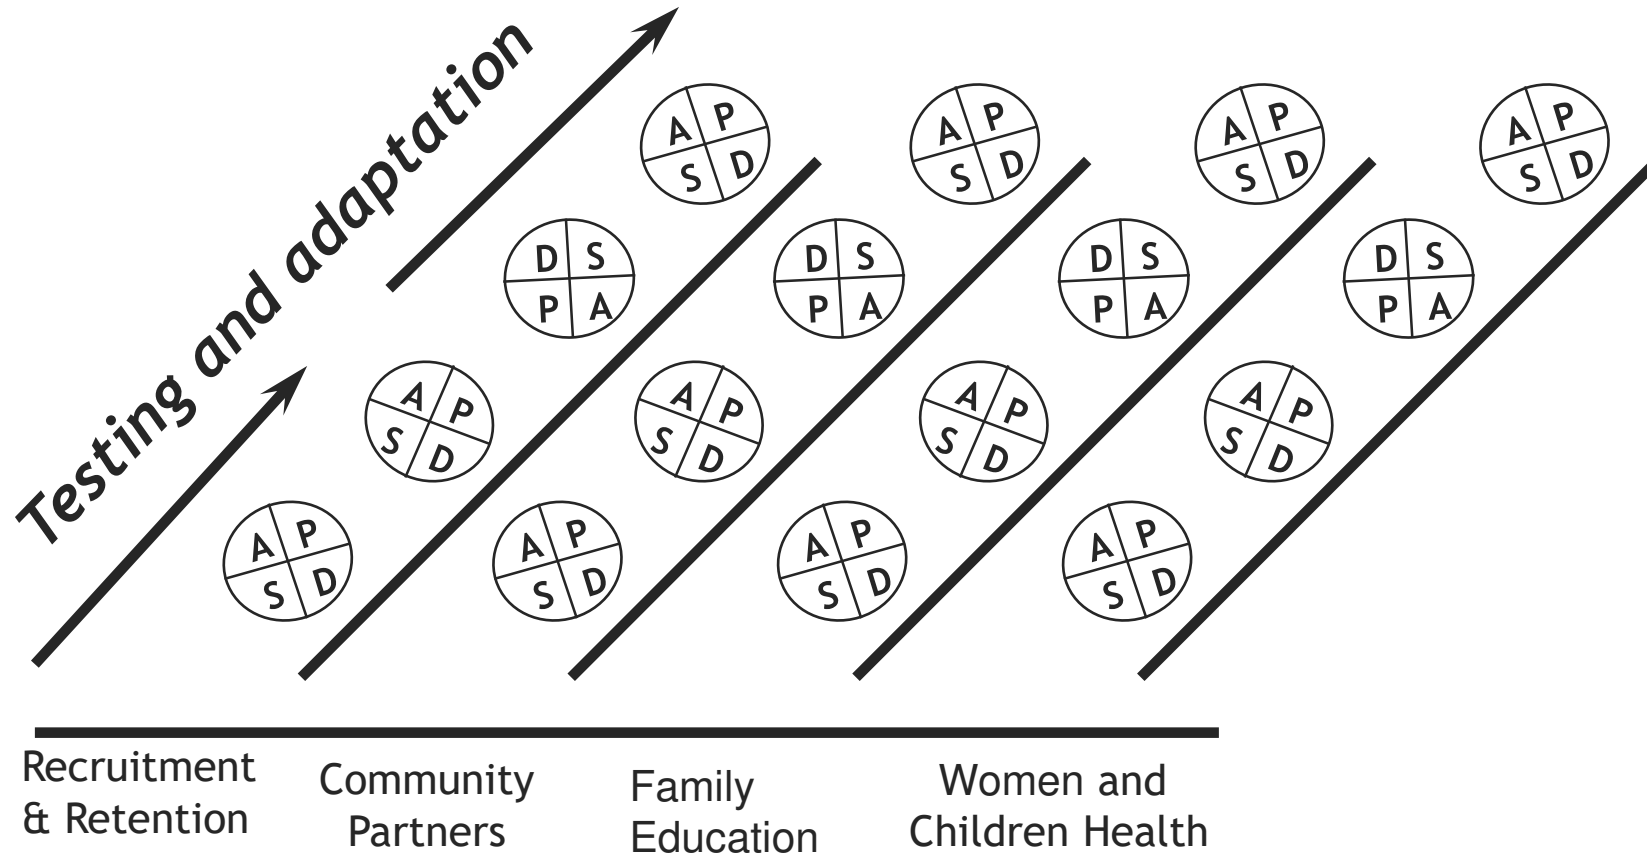

# Test on a Small Scale

- Conduct the test with one community partner, one client, next 5 clients, with one staff member
- Test the change on a small group of volunteers
- Develop a plan to simulate the change in some way

# Sequential Building of Knowledge Includes a Wide Range of Conditions in the Sequence of Tests

# Multiple PDSA Cycle Ramps

# Decrease the Time Frame for a PDSA Test Cycle

Drop down next  
“two levels” to  
plan early test  
cycles!
